Meet Rosie.

Rosie is a curious and adventurous penguin that lives in Antarctica. She loves to explore and write down everything she finds in her special green notebook.

She tends to wander a bit far from home... way too far!

Gibbs decided to follow Rosie to see what she was up to.

The mountains got smaller and the coastline disappeared. There were no other penguins in sight.

With Gibbs steering in the back and Rosie navigating in the front, they darted across the white empty snowscape.

Days passed without any sign of fish. They had no clue where they were, and they needed to move fast...

Switching gears, they set sail toward that strange blue box off in the distance, wondering what it could possibly be...

Gibbs, Rosie, and their strange blue box: the expedition of the century!

Who knew they'd find a feast and a new adventure right under their noses?
Rosie's Discoveries

Antarctic toothfish:
A species of cod known that swam in extremely cold water. They can grow up to the size of a small human. And they are very delicious.

Emperor penguins:
The largest penguin. They are known for their bright yellow and orange markings near their face. Male emperors will sit on their eggs in the freezing cold for two whole months. That’s so neat!

Gentoo penguins:
That’s me! We love to eat krill and fish. We are lighter in color when we are younger. I thought by now I would already have the cold white marks that other penguins have by their eyes, but I guess I will have to wait longer.

Penguin rookery or colony:
A group of penguins on land is called a rookery. In the water it is a raft of penguins. Other words include a hockey, a bubble, and a colony.

Crevasses:
A large crack that forms from stress in the ice. Crevasses can be really deep and are sometimes hidden under the snow.

Antarctic expeditions:
In 1911, two expeditions were racing to be the first people to the South Pole. One was led by Roald Amundsen and the other by Robert Falcon Scott. Roald beat Robert by only a few weeks. I wonder if we are the first penguins to be in this part of Antarctica.

Strange blue ice???

ADVENTURES WITH
Rosie & Gibbs
the lost penguins

ADVENTURE 1: THE JOURNEY TO THE SOUTH POLE
