A snow-carving competition was held at the South Pole to celebrate the New Year. One winterover took the opportunity to build							
a snow sculpture of an iconic video game character getting ready to chomp away.	12	13	14	15	16	17	18

A winterover enjoys the still-setting sun atop the ARO (Atmospheric Research Observatory) tower. ARO is located in the							
Clean Air Sector of the South Pole, where researchers study the atmosphere. It might be chilly, but the view is worth it.	13	14	15	16	17	18	19

One of the benefits of winters at the South Pole: auroras, or, more specifically aurora australis. This one in particular was							
dubbed "The Green Monster." Who needs daylight when you have a sky like this?	11	12	13	14	15	16	17

Perched at what looks like the edge of the universe, these drill towers dig holes deep into the ice. Once the holes are made,							
neutrino detectors are placed along cables stretching to the bottom of the holes, which reach more than a mile deep. These detectors observe and record the light emitted from neutrino interactions in the ice.	15	16	17	18	19	20	21

The flags flying at the ceremonial South Pole represent the twelve countries that made up the original signatories of the Antarctic							
up the original signatories of the Antarctic Treaty, signed in 1959, which protects Antarctica as a place for peaceful, scientific explorations. These flags take a beating from the elements and are routinely replaced. Here, brand new flags stand at attention in the early days of sunrise.	14	15	16	17	18	19	20

Summer may be in full swing at the South Pole in December, but everything in this photo seems to spell winter. Maybe it's the skis.							
An IceCube winterover is testing out a pair of cross country skis on one of their journeys to the IceCube Lab, situated about a kilometer from the main station.	14	15	16	17	18	19	20
