Snow that accumulates at the South Pole							
often results in large drifts that must be removed from around structures. The "hills" that result are tall enough to elicit smiles from this group of sledders.	11	12	13	14	15	16	17

Summer is Over							
Credit: Connor Duffy, IceCube/NSF	1	2	3	4	5	6	7
The South Pole has only two seasons— summer and winter. Crews working at							
the Pole for the summer generally arrive in October or November and depart in January or February. This Basler plane, one of the smaller aircraft for Pole	8	9	10	11	12	13	14
departures, is taking away the last group of summer personnel before the station closes for winter.	15	16	17	18	19	20	21

The Ceremonial South Pole							
Credit: Ilya Bodo, IceCube/NSF	1	2	3	4	5	6	7
Sunset at the South Pole lasts for weeks and usually offers up some nice photo							
opportunities. Here, the marker at the ceremonial South Pole is centered on the sun while it's still fully visible on the horizon. The flags flying at this spot	8	9	10	11	12	13	14
represent the twelve countries that made up the original signatories of the Antarctic Treaty, signed in 1959, which protects Antarctica as a place for peaceful,	15	16	17	18	19	20	21
scientific explorations.	22	23	24	25	26	27	28

Credit: Ilya Bodo, IceCube/NSF	7	8	9	10	11	12	13
To really enjoy auroras, you want a nice dark sky. And in winter, the South Pole enjoys							
very dark skies. The beauty of these natural spectacles goes a long way to make up for the long winter nights.	14	15	16	17	18	19	20

Snow Day!							
Credit: Ilya Bodo, IceCube/NSF	5	6	7	8	9	10	11
There's a lot of snow here for a place that is classified as a desert. That's because							
snow is carried in from strong winds that blow across the continent. The blowing snow accumulates around the station	12	13	14	15	16	17	18
and all the structures located at the Pole, including the IceCube Upgrade storage containers and the IceCube Lab.	19	20	21	22	23	24	25

Infinite Horizon							
Credit: Connor Duffy, IceCube/NSF	4	5	6	7	8	9	10
After the long winter, sunrise is quite welcome at the South Pole. The Pole is							
technically a desert, and this image's snow- swept surface is reminiscent of a sandy desert that one might see in a hot climate.	11	12	13	14	15	16	17
and ice in this barren landscape produces a calming and beautiful sunrise scene.	18	19	20	21	22	23	24
